- What is the new electricity generation supply that Firmus is supposed to be providing?

- How does a data centre and AI infrastructure accelerate the development of new renewable energy generation?

- How are Firmus bringing on additional renewable energy generation ion Tasmania?

- How will Firmus partner with this new? Energy generation project. What is the new energy generation project?

- What are the details of the new arrangements for the development of new wind and solar projects? Where will they be sited?

- There is no spare capacity to supply this new electricity demand. The state has had to import power for 10-12 months of the last 2 years. We are getting drier, but expected to supply more?

- Their back up energy are diesel generators (which Firmus lied about the no. of on site).

- How can you acknowledge that the new renewable generation coming online may not be at the time the AI projects become operational. The AI projects should not be operational until the new renewable generation is online! Cart before horse much.....

- The state has had to import power for 10-12 months of the last 2 years. Our power production is decreasing. How are we to provide Marinus and Firmus and the State?

- Why 3 in the space of Northern Tasmania? Overkill and simply too many.

- No. of positions post-construction minimal (100 staff at the largest – wow!). No guarantee won't be flown in Firmus staff in any event. How about helping out Bell Bay instead.
